

Good Thinking

Clever Card Original 5 Pack

Step 1: Prepare some hot water. Water just before it starts to boil works well. These higher temperatures will be quicker, however will be more dangerous and can cause scalds. (so please be careful)

Step 2: Place your Clever Card in the hot water. Depending on the temperature of the water it can take between 15 -60 seconds to melt. The card is molten when it goes soft.

Step 3: Remove the molten plastic from the hot water. The Clever Card plastic will be at a safe temperature and can be moulded with hands and/or the use of basic tools.

The plastic will begin to solidify after 3 minutes. It will be hard after 10 minutes and will be completely set after 1 hour. The plastic can be reused 100's of times... Simply reheat and reshape.
