NOTES:

- TÜV certification only valid for loading table above.
- The values are characteristic according to Eurocode (European standards). Partial safety factors (1,35/1,5) are considered.
- Interaction of internal forces at connector are considered.
- The table data have no limitation of deflection.
- The loads are only valid for static loads. The system is perfect and secured against lateral buckling.
- All static systems, other than single spans, need an individual structural calculation. Please contact a structural engineer.
- The self-weight of the truss system is considered.
- Loading figures are only valid for single spans with supports at both ends.
- The deflection is calculated for a single truss spann.
- Load application occurs directly in the nodes and both framework sides are loaded equally.
- The values are only valid for the single span girders analysed here. Complex structures are not covered by this!
- Read the manual before assembling, using and loading the truss.
