

# Good Thinking

## Clever Card

Original Fluoro 5 Pack

mould shape create repair  
customise prototype

These cards are produced with a special bio-polymer that has the ability to melt at only 62°C (about the same as a nice hot chocolate)

When in a solid state it is strong like nylon. However when it is molten it is safe to touch with your hands and feels like plasticine.

Developed and produced by a Kiwi Plastics Technician right here in New Zealand
